

DON'T BELIEVE A WORD WE SAY.

ASK A RESPIRATORY THERAPIST.

Ask about Precision Flow™ and High Flow Therapy...

We, at Vapotherm, live and breathe Precision Flow™ and the virtues of High Flow Therapy. After all, we invented it. So instead, we encourage you to talk to the experts in respiratory equipment. Ask the Respiratory Therapists who've had years of experience with traditional devices and treatments, who are now devoted users of Vapotherm and High Flow Therapy.

They'll tell you that Precision Flow™ is brought to you by Vapotherm, the company who originated High Flow Therapy via nasal cannula for the non-invasive delivery of inspired gas flows from 1 to 40 liters per minute. They'll add that because the patient interface is a simple nasal cannula, patients experience greater comfort and compliance. They'll go on to detail how Precision Flow™ moves beyond conventional humidification, incorporating flow control and gas blending with heat and humidification for optimal gas conditioning. They'll also explain how Precision Flow™ incorporates sophisticated alarm and monitoring features for optimal safety and efficacy. In fact, once you ask Respiratory Therapists about Precision Flow™, you may have trouble stopping them. Because, now that they use it, many can't imagine treating patients without it. To learn more about Precision Flow™ and High Flow Therapy visit us at www.vtherm.com.

PRECISIONflow™

Breathe well. Get well.
